Pending Nucleic Acid and/or Pending Amino Acid database searches now generate two sets of results. These databases were split into to two parts to reduce the time needed to update the databases daily. The split freed up more machine time for processing searches.

Searches run against the Nucleic Acid Pending database produce two sets of results, with the extensions, .rnpm and .rnpn
Searches run against the Amino Acid Pending database produce two sets of results, with the extensions, .rapm and .rapn

The Pending database search results should not be left in the case because they contain data that is confidential.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                             The present invention relates to mutant human vascular endothelial growth factor (VEGF) proteins (AAB28233-B28236). The present sequence is one such mutant. The mutant VEGF proteins have selective binding affinity for kinase domain region (KDR) receptor. The mutant VEGF proteins are useful for detecting KDR receptors for diagnostic purposes. In addition, the mutant VEGF proteins are useful for stimulating vasculogenesis or angiogenesis by exposing mammalian cells expressing a KDR receptor to the mutant proteins to treat trauma to the vascular network caused by surgical incisions, wounds, lacerations, penetration of blood vessels
                                                                                                                                                 Vascular endothelial growth factor variant useful for detecting kinase domain region receptor for diagnostic purposes, comprises one or more amino acid mutations in native VEGF and has selective binding affinity
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                          the present sequence is not shown in the specification but is a from the wild-type human VEGF sequence given in Fig 1.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Human, vascular endothelial growth factor; VEGF; mutein; mutation; kinase domain region receptor; KDR; vasculogenesis; angiogenesis; surgical incision; wound; laceration; blood vessel; ulcer.

```

```
The present invention relates to mutant human vascular endothelial growth factor (VBGF) proteins (AAB28333-B28236. The present sequence is one such mutant. The mutant VBGF proteins have selective binding affinity for kinase domain region (KDR) receptor. The mutant VBGF proteins are useful for detecting KDR receptors for diagnostic purposes. In addition, the mutant VBGF proteins are useful for stimulating vasculogenesis or anglogenesis by exposing mammalian cells expressing a KDR receptor to the mutant proteins to treat trauma to the vascular network caused by surgical incisions, wounds, lacerations, penetration of blood vessels
                                                                                                                                                                                                                                                    Vascular endothelial growth factor variant useful for detecting kinase domain region receptor for diagnostic purposes, comprises one or more amino acid mutations in native VEGF and has selective binding affinity
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              the present sequence is not shown in the specification but is of from the wild-type human VEGF sequence given in Fig 1.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Human; vascular endothelial growth factor; VEGF; mutein; mutation;

The present invention relates to polypeptides that bind cellular receptors for vascular endothelial growth factors (VEGFs), the polynucleotides encoding them, and their use for identifying agents that modulate interactions between VEGFs and their receptors. VEGFs and their receptors play an important role in vasculogenesis, the development of the embryonic vasculature from early differentiating endothelial cells and angiogenesis, the process of forming new blood vessels from pre-existing ones. Modulators of interactions between VEGF and its receptors may be used to treat dysfunction of the endothelial cells regulatory system. Such disorders include cancers, abnormal angiogenesis, proliferative retinopathies, age-related macular degeneration, rheumatoid arthritis and psoriasis. The polypeptides of the invention exhibit unique receptor binding profiles compared to known naturally, occurring VEGFs. The present sequence represents the polypeptide encoded by human
                     Polypeptides that bind cellular receptors for vascular endothelial growth factors, polynucleotides encoding them -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Human; vascular endothelial growth factor; VEGF-A; vasculogenesis;

                                                                                                                                                                                                                                                                                                                                                The present invention relates to mutant human vascular endothelial growth factor (VBGF) proteins (AAB28233-B28236). The present sequence is one such mutant. The mutant VBGF proteins have selective binding affinity for kinase domain region (KDR) receptor. The mutant VBGF proteins are useful for detecting KDR receptors for diagnostic purposes. In addition,
                                                                                                                                                                                 Vascular endothelial growth factor variant useful for detecting kinase domain region receptor for diagnostic purposes, comprises one or more amino acid mutations in native VEGF and has selective binding affinity

receptors may be used to treat dysfunction of the endothelial cell regulatory system. Such disorders include cancers, abnormal angiogenesis, proliferative retinopathies, age-related macular degeneration, rheumatoid arthritis and psoriasis. The polypeptides of the invention exhibit unique receptor binding profiles compared to known naturally occurring VEGFS. The present invention relates to polypeptides that bind cellular receptors for vascular endothelial growth factors (VEGFS), the bolynucleotides encoding them, and their use for identifying agents that modulate interactions between VEGFS and their receptors. VEGFS and their receptors play an important role in vasculogenesis, the development of the embryonic vasculature from early differentiating endothelial cells and angiogenesis, the process of forming new blood vessels from pre-existing ones. Modulators of interactions between VEGF and its present sequence represents the polypeptide encoded by human VEGF-A/VEGF-C hybrid construct clone 53-3.

Such disorders include cancers, abnormal angiogenesis, oroliferative retinopathies, age-related macular degeneration, rheumatoid inthritis and psoriasis. The polypeptides of the invention exhibit unique
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The present invention relates to polypeptides that bind cellular receptors for vascular endothelial growth factors (VEGFS), the polynucleotides encoding them, and their use for identifying agents that modulate interactions between VEGFs and their receptors. VEGFs and their receptors play an important role in vasculogenesis, the development of the embryonic vasculature from early differentiating endothelial cells and an angiogenesis, the process of forming new blood vessels from pre-existing ones. Modulators of interactions between VEGF and its
   receptor binding profiles compared to known naturally occurring VEGFs.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          occurring VEGFs.
                                                                                                                                                                                                                                    Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Polypeptides that bind cellular receptors for vascular endothelial growth factors, polynucleotides encoding them
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Human; vascular endothelial growth factor; VEGF-A; vasculogenesis;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    angiogenesis; blood vessel; cancer; proliferative retinopathy; psoriasis; age-related macular degeneration; rheumatoid arthritis; cardiovascular; VEGF-C; mutant; mutein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          eceptors may be used to treat dysfunction of the endothelial cell
                           The present sequence represents the polypeptide encoded by human VEGF-A/VEGF-C hybrid construct clone 82-11.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              receptor binding profiles compared to known naturally occurring the present sequence represents the polypeptide encoded by human VEGF-A/VEGF-C hybrid construct clone 82-15.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    proliferative retinopathies, age-related macular degeneration, rheumatoid arthritis and psoriasis. The polypeptides of the invention exhibit unique receptor binding profiles compared to known naturally occurring VEGFs.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    receptors for vascular endothelial growth factors (VEGFS), the polynucleotides encoding them, and their use for identifying agents that modulate interactions between VEGFs and their receptors. VEGFs and their receptors play an important role in vasculogenesis, the development of the embryonic vasculature from early differentiating endothelial cells pre-existing ones. Modulators of interactions between VEGF and its receptors may be used to treat dysfunction of the endothelial cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            requlatory system. Such disorders include cancers, abnormal angiogenesis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Gaps
                                                            Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Human, vascular endothelial growth factor; VEGF-A; vasculogenesis; angiogenesis; blood vessel; cancer; proliferative retinopathy; psoriasis; age-related macular degeneration; rheumatoid arthritis;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Polypeptides that bind cellular receptors for vascular endothelial growth factors, polynucleotides encoding them
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           the present invention relates to polypeptides that bind cellular
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present sequence represents the polypeptide encoded by human VEGF-A/VEGF-C hybrid construct clone 84-11.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ö

requirects system. Such disorders include cancers, abnormal anglogenesis, proliferative retinopathies, age-related macular degeneration, rheumatoid arthritis and psoriasis. The polypeptides of the invention exhibit unique
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The present invention relates to polypeptides that bind cellular receptors for vascular endothelial growth factors (VEGFs), the polymucleotides encoding them, and their use for identifying agents that modulate interactions between VEGFs and their receptors. VEGFs and their receptors play an important role in vasculogenesis, the development of the embryonic vasculature from early differentiating endothelial cells
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          and anglogenesis, the process of forming new blood vessels from pre-existing ones. Modulators of interactions between VEGF and its receptors may be used to treat dysfunction of the endothelial cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Polypeptides that bind cellular receptors for vascular endothelial growth factors, polynucleotides encoding them
                                                                                                                                                                                       Human; vascular endothelial growth factor; VEGF-A; vasculogenesis;

regulatory system. Such disorders include cancers, abnormal angiogenesis, proliferative retinopathies, age-related macular degeneration, rheumatoid arthritis and psoriasis. The polypeptides of the invention exhibit unique
                             receptors for vascular endothelial growth factors (VEGFS), the polynucleotides encoding them, and their use for identifying agents that modulate interactions between VEGFS and their receptors. VEGFS and their receptors play an important role in vasculogenesis, the development of the embryonic vasculature from early differentiating endothelial cells and angiogenesis, the process of forming new blood vessels from pre-existing ones. Modulators of interactions between VEGF and its receptors may be used to treat dysfunction of the endothelial cell
                                                                                                                                                                                                                                                                                                                                                                                            Tiles compared to known naturally occurring VEGFs. represents the polypeptide encoded by human construct clone 12-7.
present invention relates to polypeptides that bind cellular

receptors may be used to treat dysfunction of the endothelial cell sequiatory system. Such disorders include cancers, abnormal angiogenesis, proliferative retinopathies, age-related macular degeneration, rheumatoid arthritis and psoriasis. The polypeptides of the invention exhibit unique
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present invention relates to polypeptides that bind cellular receptors for vascular endothelial growth factors (VEGFS), the polynucleotides encoding them, and their use for identifying agents that modulate interactions between VEGFs and their receptors. VEGFs and their receptors play an important role in vasculogenesis, the development of the embryonic vasculature from early differentiating endothelial cells and angiogenesis, the process of forming new blood vessels from pre-existing ones. Modulators of interactions between VEGF and its
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           receptor binding profiles compared to known naturally occurring VEGFs. The present sequence represents the polypeptide encoded by human VEGF-A/VEGF-C hybrid construct clone 31-7.
                                                                                                                                                                                                                                                                                                                                                                                                                             Human; yascular endothelial growth factor; VEGF-A; vasculogenesis; andjogenesis; blood vessel; cancer; proliferative retinopathy; psoriasis; age-related macular degeneration; rheumatoid arthritis; cardiovascular; VEGF-C; mutant; mutein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Polypeptides that bind cellular receptors for vascular endothelial growth factors, polynucleotides encoding them

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                δ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       DP.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       receptors for vascular endothelial growth factors (VEGFS), the polynucleotides encoding them, and their use for identifying agents that modulate interactions between VEGFS and their receptors. VEGFS and their receptors play an important role in vasculogenesis, the development of the embryonic vasculature from early differentiating endothelial cells and angiogenesis, the process of forming new blood vessels from pre-existing ones. Modulators of interactions between VEGF and its receptors may be used to treat dysfunction of the endothelial cell regulatory system. Such disorders include cancers, abnormal angiogenesis, proliferative retinopathies, age-related macular degeneration, rheumatoid arthritis and psoriasis. The polypeptides of the invention exhibit unique receptor binding profiles compared to known naturally occurring VEGFS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The present sequence represents the polypeptide encoded by human VEGF-A/VEGF-C hybrid construct clone 31-3.

proliferative retinopathies, age-related macular degeneration, rheumatoid
arthritis and psoriasis. The polypeptides of the invention exhibit unique
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present invention relates to polypeptides that bind cellular receptors for vascular endothelial growth factors (VEGFs), the polynucleotides encoding them, and their use for identifying agents that modulate interactions between VEGFs and their receptors. VEGFs and their receptors play an important role in vasculogenesis, the development of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         abnormal angiogenesis

The present invention relates to polypeptides that bind cellular receptors for vascular endothelial growth factors (VEGFs), the polynucleotides encoding them, and their use for identifying agents that modulate interactions between VEGFs and their receptors. VEGFs and their receptors play an important role in vasculogenesis, the development of the embryonic vasculature from early differentiating endothelial cells and anglogenesis, the process of forming new blood vessels from pre-existing ones. Modulators of interactions between VEGF and its receptors may be used to treat dysfunction of the endothelial cell regulatory system. Such disorders include cancers, abnormal angiogenesis, proliferative retinopathies, age-related macular degeneration, rheumatoid arthritis and psoriasis. The polypeptides of the invention exhibit unique receptor binding profiles compared to known naturally occurring VEGFs.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present sequence represents the polypeptide encoded by human VEGF-A/VEGF-C hybrid construct clone 12-15.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Gaps

A;Title: Molecular cloning and characterization of a novel human receptor protein tyn
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Cross-references: GB:U73727; NID:g1923222; PIDN:AAB51343.1; PID:g1923223
Comment: This enzyme belongs to type II receptor protein tyrosine phosphatase which
and an immunoglobulin-like domains.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Superfamily: protein-tyrosine-phosphatase, receptor type mu; fibronectin type III ; tyrosine-phosphatase homology tyrosine-phosphoprotein; phosphoric monoester hydrolase; tyrosine-specific phosphe
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                A;Cross-references: EMBL:247816; NID:g642303; PIDN:CAA87825.1; PID:g642306; MIPS:YML0

Murphy J.F., Fitzgerald D.J.;

"Vascular endothelial growth factor induces cyclooxygenase-dependent "vascular endothelial growth factor active in angiogenesis, vasculogenesis and endothelial cell growth it induces endothelial cell growth. Tit induces endothelial cell growth it induces permeabilization of blood vessels. It binds to the induces permeabilization of blood vessels. It binds to the vEGFRI/Flt-1 and VEGFRZ/Kdr receptors and to heparan sulfate and heparin. Neuropilin-1 binds isoforms VEGF-165 and VEGF-145.

--- SUBUNIT: Homodimer; disulfide-linked. Also found as heterodimer with PlGF (By similarity).

--- SUBCELULAR LOCATION: VEGFI21 is acidic and freely secreted. VEGFI65 is more basic, has heparin-binding properties and, although a signicant proportion remains cell-associated, most is freely secretion and is bound avidly by heparin and the extracellular matrix, although it may be released as a soluble form by heparin, heparinse or plasmin.

Vascular endothelial growth factor A (VEGF-A) (Vascular permeability factor) (VPF)
                                                                                                                                                                                                                     Berse B.;
Submitted (JAN-1992) to the EMBL/GenBank/DDBJ databases.
-!- FUNCTION: Growth factor active in angiogenesis, and endothelial
cell growth. Induces endothelial proliferation and vascular
permeability (By similarity).
                                                                                                                                                                                                                                                                                                                                                                 similarity).
-!- SIMILARITY: BELONGS TO THE PDGF/VEGF FAMILY OF GROWTH FACTORS.
                                                                                                        Cavia porcellus (Guinea pig).

"Pitultary follicular cells secrete a novel heparin-binding growth factor specific for vascular endothelial cells."

Blochem. Blochys. Res. Commun. 161:851-858 [1989].

--- FUNCTION: Growth factor active in angiogenesis, vasculogenesis and endothelial cell growth. It induces endothelial cell prowth. It induces endothelial cell promotes cell migration, inhibits apoptosis, and induces permeabilization of blood vessels. It binds to the VEGFRI/Fit-1 and VEGFRZ/Kdr receptors and to heparan sulfate and

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             BIOL. Chem. 271:3877-3883(1996).
- FUNCTION: Growth factor active in anglogenesis, vasculogenesis and endothelial cell growth. It induces endothelial cell prowth. It induces endothelial cell proliferation, promotes cell migration, inhibits apoptosis, and proliferation, promotes cell migration, inhibits apoptosis, and induces permeabilization of blood vessels. It binds to the induces permeabilization of blood vessels. It binds to the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 TISSUE SPECIFICITY: In developing embryos, expressed mainly in the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                SUBCELLULAR LOCATION: VEGF-1 and VEGF-3 are secreted while VEGF-3 remains cell-surface associated unless released by heparin.
                                                                                                                 Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               choroid plexus, paraventricular neuroepithelium, placenta and kidney glomeruli. Also found in bronchial epithelium, adrenal gland and in seminiferous tubules of testis. High expression of

J. Biol. Chem. 270:7717-7723(1995).
-!- FUNCTION: Growth factor active in angiogenesis, vasculogenesis and endothelial cell growth. It induces endothelial cell proliferation, promotes cell migration, inhibits apoptosis, and induces permeabilization of blood vessels. It binds to the veckRL/Fit-1 and VEGFR/Kdr receptors and to heparan sulfate and heparin (By similarity).
                                                                                                                                                                        Ishii H., Arakawa T., Okayama M., Oota I., Takuma T., Inomata K.; "Developmental expression of vascular endothelial growth factor-A (VEGF-A) splicing variants, VEGF-A188, VEGF-A164, and VEGF-A120 in rat masseter muscle.;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Isoid=p16612-4; Sequence=VSP_004631;
-:- TISSUE SPECIFICITY: Expressed in the pituitary, in brain, in particularily in supraoptic and paraventricular nuclei and the choroid plexus. Also found abundantly in the corpus luteum of the ovary and in kidney glomeruli.
-:- SIMILARITY: BELONGS TO THE PDGF/VEGF FAMILY OF GROWTH FACTORS.

Also found as heterodimer with PIGF (By similarity).

SUBCELLULAR LOCATION: VEGF-A120 is acidic and freely secreted.

SUBCELLULAR LOCATION: VEGF-A120 is acidic and freely secreted.

VEGF-A164 is more basic, has heparin binding properties and, although a signicant proportion memains cell-associated, most is freely secretion and reproportion remains cell-associated after secretion and is bound avidly by heparin and the extracellular matrix, although it may be released as a soluble form by heparin, heparinase or plasmin (By similarity).

-!- FUNCTION: Growth factor active in anglogenesis, vasculogenesis and endothelial cell growth. It induces endothelial cell profess cell migration, inhibits apoptosis, and induces permeablization of blood vessels. It binds to the VEGFRI/Fit-1 and VEGFRZ/Kdr receptors and to heparan sulfate and
                                                                                                                                                                                                                                                                                                                                                                                                                                    Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Homodimer; disulfide-linked. Also found as heterodimer
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            SEQUENCE FROM N.A.

-:- FUNCTION: Growth factor active in angiogenesis, vasculogenesis and endothelial cell growth. It induces endothelial cell proliferation, promotes cell migration, inhibits apoptosis, and induces permeabilization of blood vessels. It binds to the VEGFRI/FIL-1 and VEGFRZ/Kdr receptors and to heparan sulfate and heparin (By similarity).

-:- SUBUNIT: Homodimer; disulfide-linked. Also found as heterodimer

                                                                                                                                                                 Cell Tissue Res. 296:339-349(1999).

-!- FUNCTION: Growth factor active in angiogenesis, vasculogenesis and endothelial cell growth. It induces endothelial cell prointers cell migration, inhibits apoptosis, and induces. permeabilization of blood vessels. It binds to the VEGFRI/Fit-1 and VEGFRZ/Kdr receptors and to heparan sulfate and heparin (By similarity).
                                                                                                                                                                                                                                                              SUBDATE: Homodimer; disulfide-linked. Also found as heterodimer with PIGF (By similarity).
SUBCELLULAR LOCATION: Secreted but remains associated to cells or

                                                                                                                                                                                                                                                                  Miura N., Misumi K., Rawahara K., Nakashima M., Fukumitsu S., Kawabata H., Uto N., Oka T., Maruyama I., Sakamoto H.; "Cloning of cDNa and high-level expression of equine vascular endotherial growth factor (VBGF)."

Submitted (JAN-2001) to the EMBL/GenBank/DDBJ databases.

-!- FUNCTION: Growth factor active in anglogenesis, and endothelial cell growth. Induces endothelial proliferation and vascular permeability (By similarity).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            -!- SUBUNIT: Homodimer; disulfide-linked. Also found as heterodimer with PIGF (By similarity):
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    VASCULAR ENDOTHELIAL GROWTH FACTOR A. -i- INDUCTION: UPREGULATED UPON CELL CONTACT.
-i- SIMILARITY: Contains 1 MAM domain.
-i- SIMILARITY: Contains 1 immunoglobulin-like C2-type domain.
-i- SIMILARITY: Contains 4 fibronectin type III domains.
-i- SIMILARITY: Contains 2 protein-tyrosine phosphatase domains.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  (POTENTIAL)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          (POTENTIAL)

FUNCTION: LIKELY TO REPRESENT A WIDESPREAD ENDOPROFEASE ACTIVITY WITHIN THE CONSTITUTIVE AND RECULATED SECRETORY PATHWAY CAPABLE OF CLEAVAGE AT THE RX(K/R)R CONSENSUS MOTHE. MAY BE RESPONSIBLE FOR THE MATURATION OF GASTROINTESTINAL PEPTIDES. MAY BE INVOLVED IN THE CELLULAR PROLIFERATION OF ADRENAL CORTEX VIA THE ACTIVATION OF GROWTH FACTORS.
                                                                                                                                       proproteins by cleavage of Arg-Xaa-Yaa-ARG-1-Zaa bonds, where Xaa can be any amino acid and Yaa is Arg or Liss.
SUBCELLULAR LOCATION: PCSA IS SECRETED THROUGH THE REGULATED
SECRETORY PATHWAY. PCSB IS A TYPE I MEMBRANE PROTEIN LOCALIZED TO
A PARANUCLEAR POST-GOLGI NETWORK COMPARTMENT IN COMMUNICATION WITH
                                                                                                                        CATALYTIC ACTIVITY: Release of mature proteins from their
                                                                                                                                                                                                                                                                    Event=Alternative splicing: Named isoforms=2;

                                                                                                                                                                                                                                EARLY ENDOSOMES
   Dev.
```

Name=PC5B; Synonyms=Long; IsoId=Q04592-1; Sequende=Displayed;

-1-TISSUE SPECIFICITY: PC5A.IS EXPRESSED IN MOST TISSUES BUT IS MOST ABUNDANT IN THE INTESTINE AND ADRENALS. PC5B IS EXPRESSED IN THE INTESTINE, ARRANALS AND LUNG BUT NOT IN THE BRAIN.

-1-DEVELOPMENTAL STAGE: WEAKLY EXPRESSED THROUGHOUT THE EMBRYO.

EXCEPT IN THE DEVELOPING WERNOUS SYSTEM, THE RIBS AND THE LIVER, BUT MARKEDLY UPREGULATED AT DISCRETE SITES DURING DEVELOPMENT. AT E6.5, PROMINENT EXPRESSION IN EXTRAGEMENTONIC ENDODERM, AMNION AND NASCENT MESODERM. AT 8.5, ABUNDANT EXPRESSION IN SOMITES AND YOLK SAC FOLLOWED BY A CONFINATION TO DERMAMYOTOME COMPARTMENT. BETWEEN E9.5 AND E11.5, ABUNDANT EXPRESSION IN THE LIMBS IS CONFINED TO THE CONDENSION MESSENCHYM SURROUNDING THE CARTILAGE. AT THIS STAGE, STRONG EXPRESSION IN THE MUSCLE OF THE THIS STAGE, STRONG EXPRESSION IN THE MUSCLE OF THE LONGUE. AT E15.5, ABUNDANT EXPRESSION IN VERTEBRAL AND FACIAL CARTILAGE PRIMORDIA AND IN THE MUSCLE OF THE TONGUE. AT E16.5, ABUNDANT EXPRESSION IN THE MUSCLE OF THE INDESTINAL VILLIFICATION BOOK BOOK AND IN THE MUSCLE OF THE INDESTINAL VILLIFICATION AND STAGES BUT SIGNIFICANT LYBLE. VSP\_005439; Sequence=VSP\_005438, Name=PC5A; Synonyms=Short; IsoId=Q04592-2; Sequence

DOMAIN: THE PROPEPTIDE DOMAIN ACTS AS AN INTRAMOLECULAR CHAPERONE ASSISTING THE FOLDING OF THE 2YMOGEN WITHIN THE ENDOPLASMIC

SORTING INFORMATION. AC 1 DIRECTS TGN LOCALIZATION AND INTERACTS WITH THE TGN SORTING PROTEIN PACS-1. DOMAIN: AC 1 AND AC 2 (CLUSTERS OF ACIDIC AMINO ACIDS) CONTAIN RETICULUM

SIMILARITY: Belongs to peptidase family S8. SIMILARITY: Contains 1 homo B/P domain.

Database :

Minimum DB seq length: 0 Maximum DB seq length: 2000000000 Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
